

↳ animated background loop

→ on start click, slide out to slide in next elements

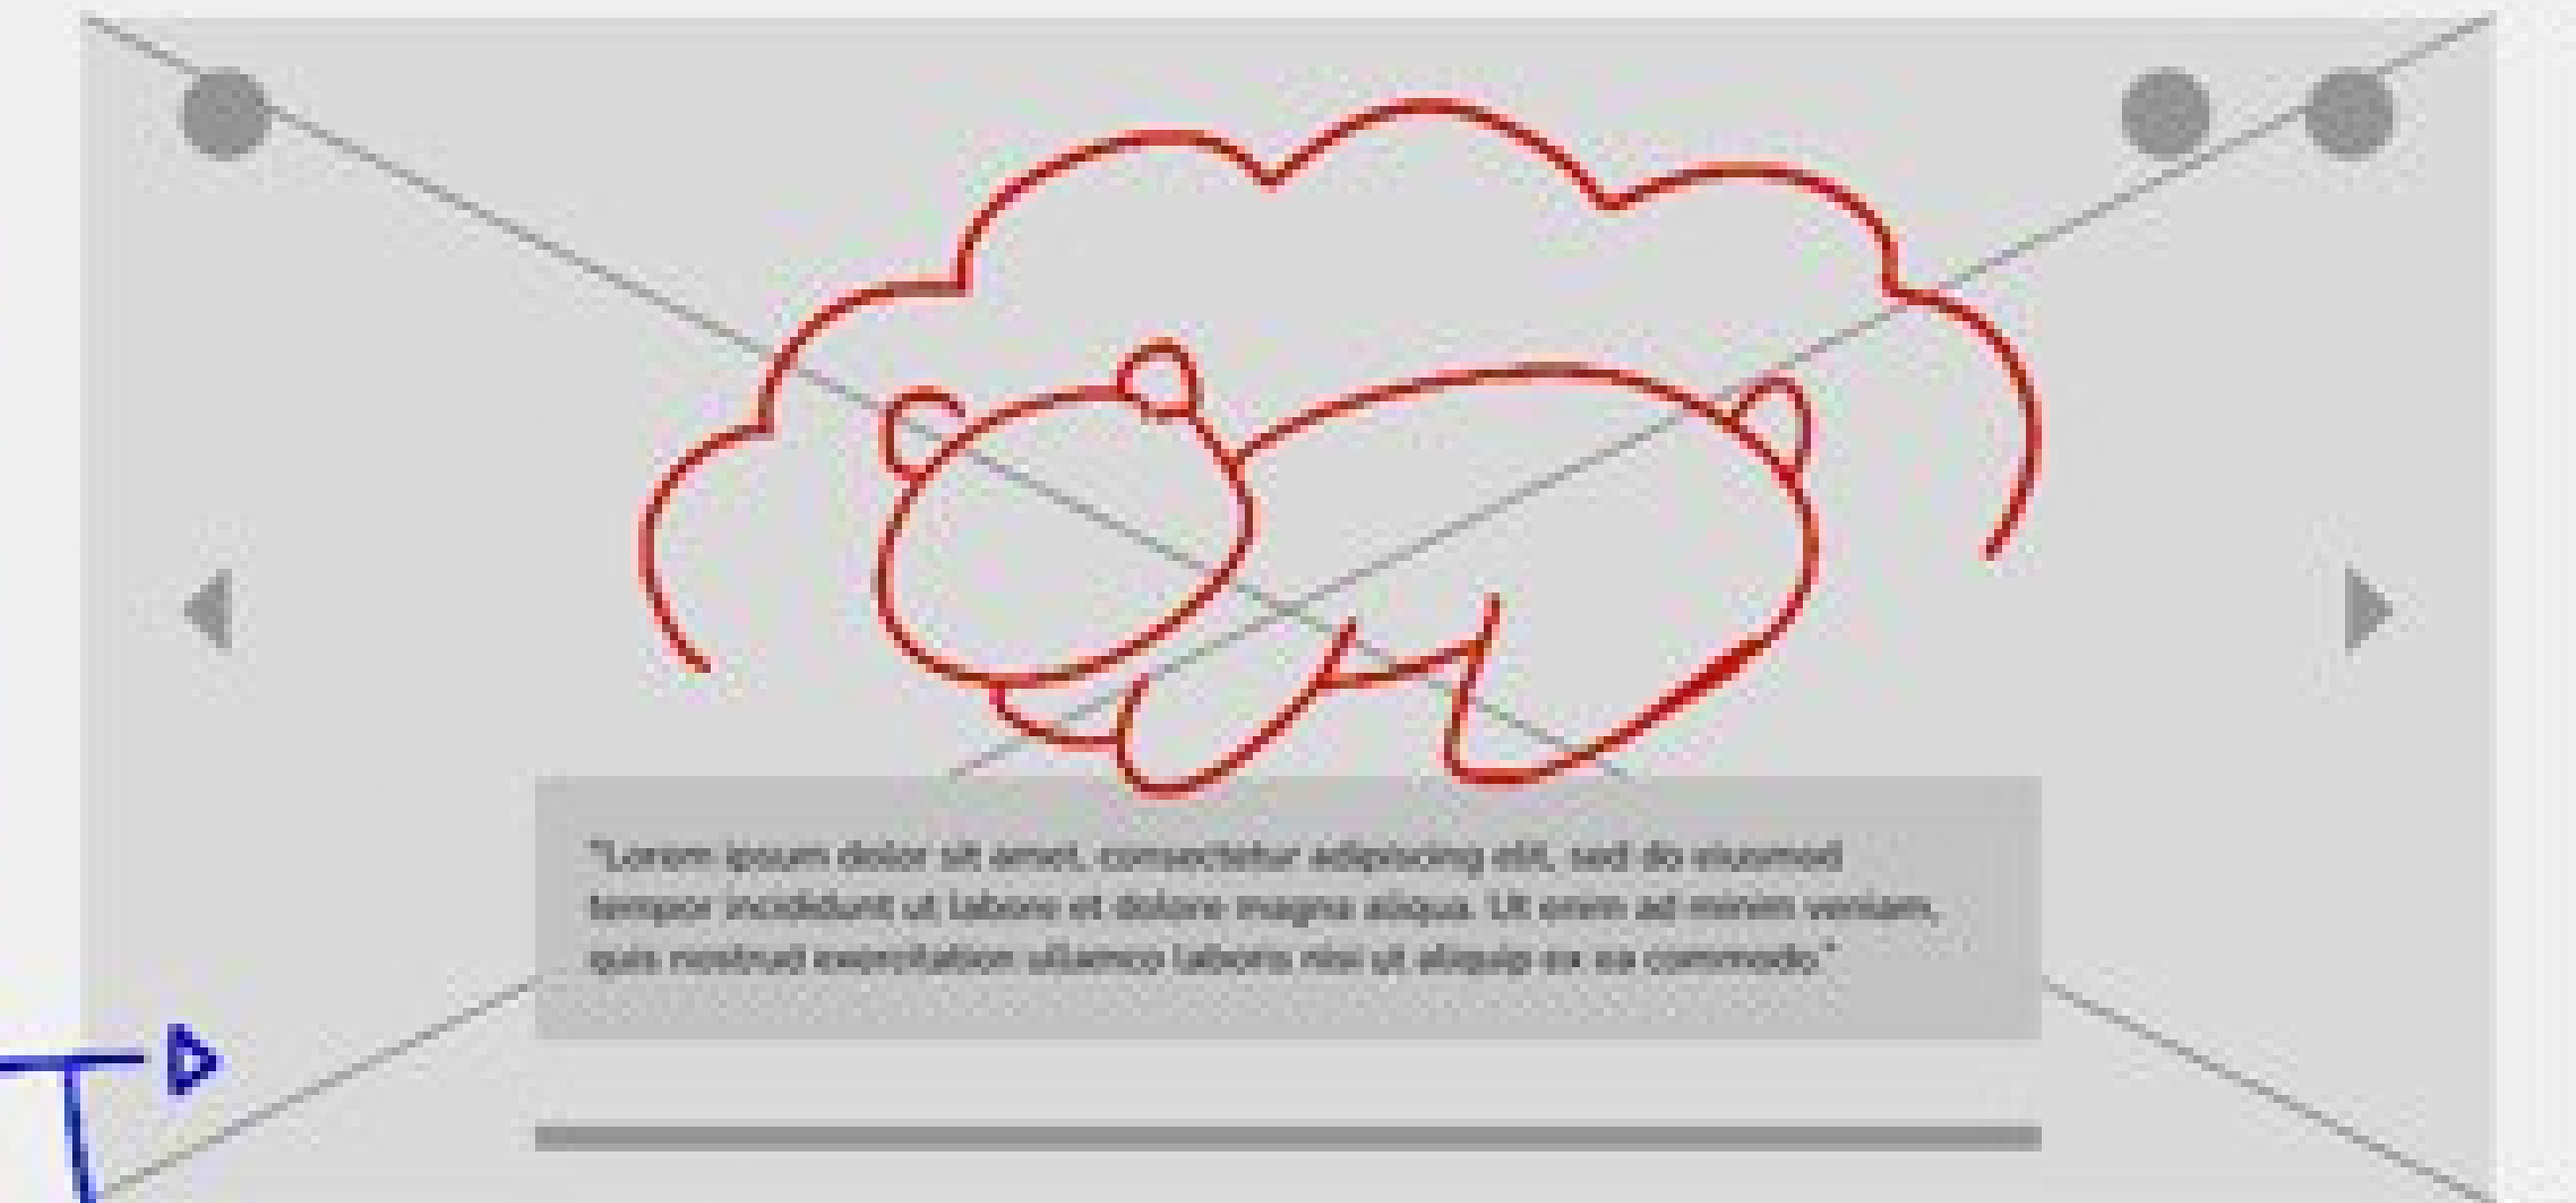

navigation arrows

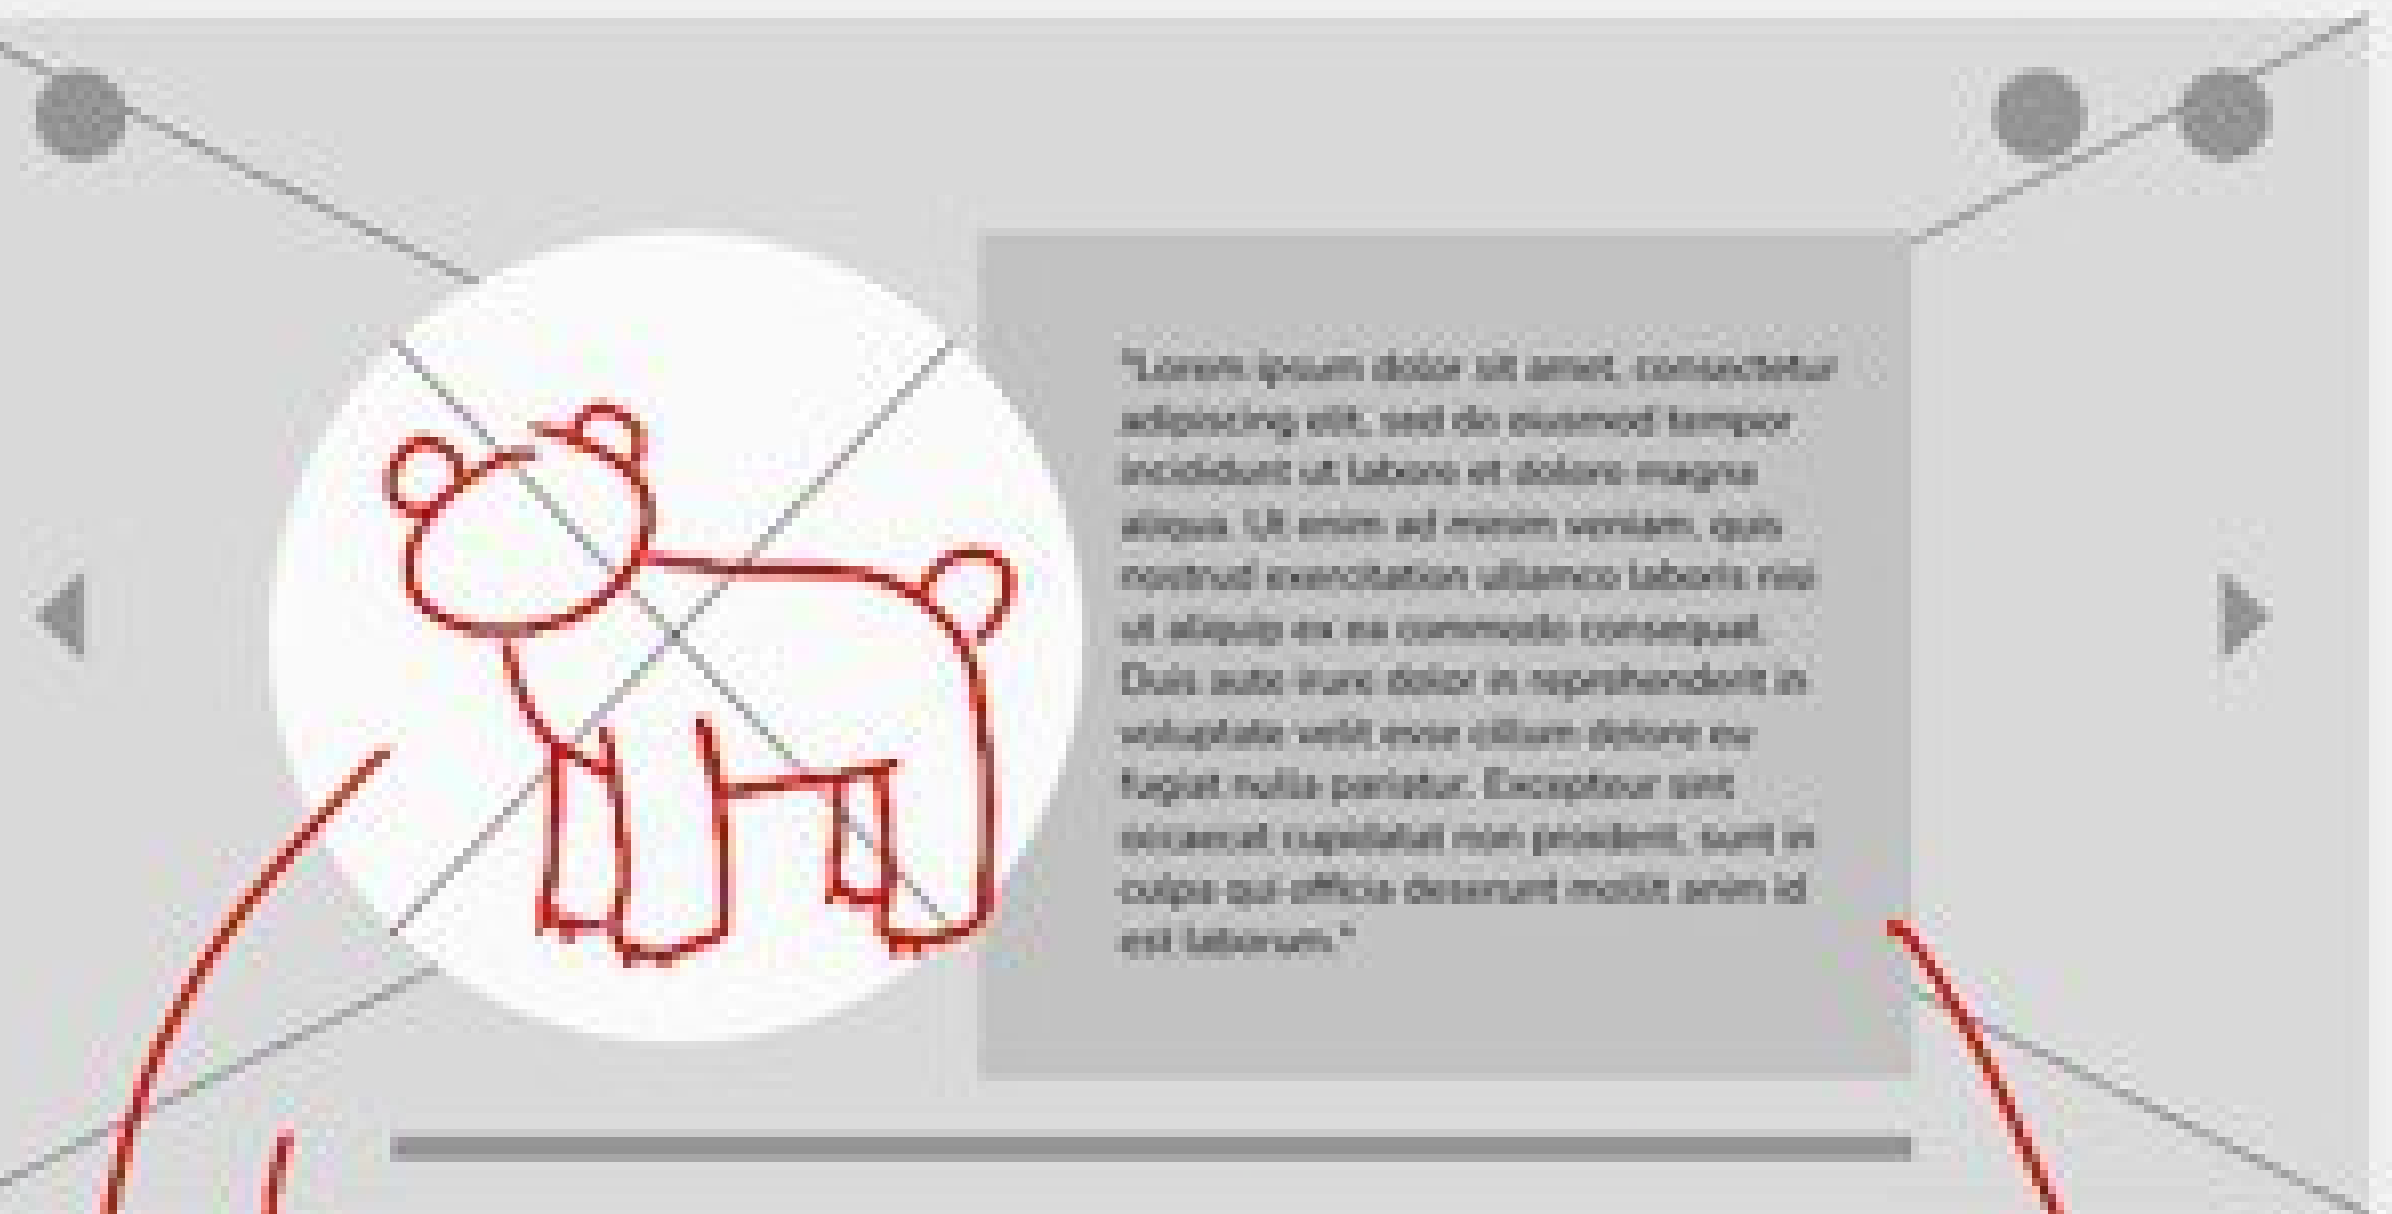

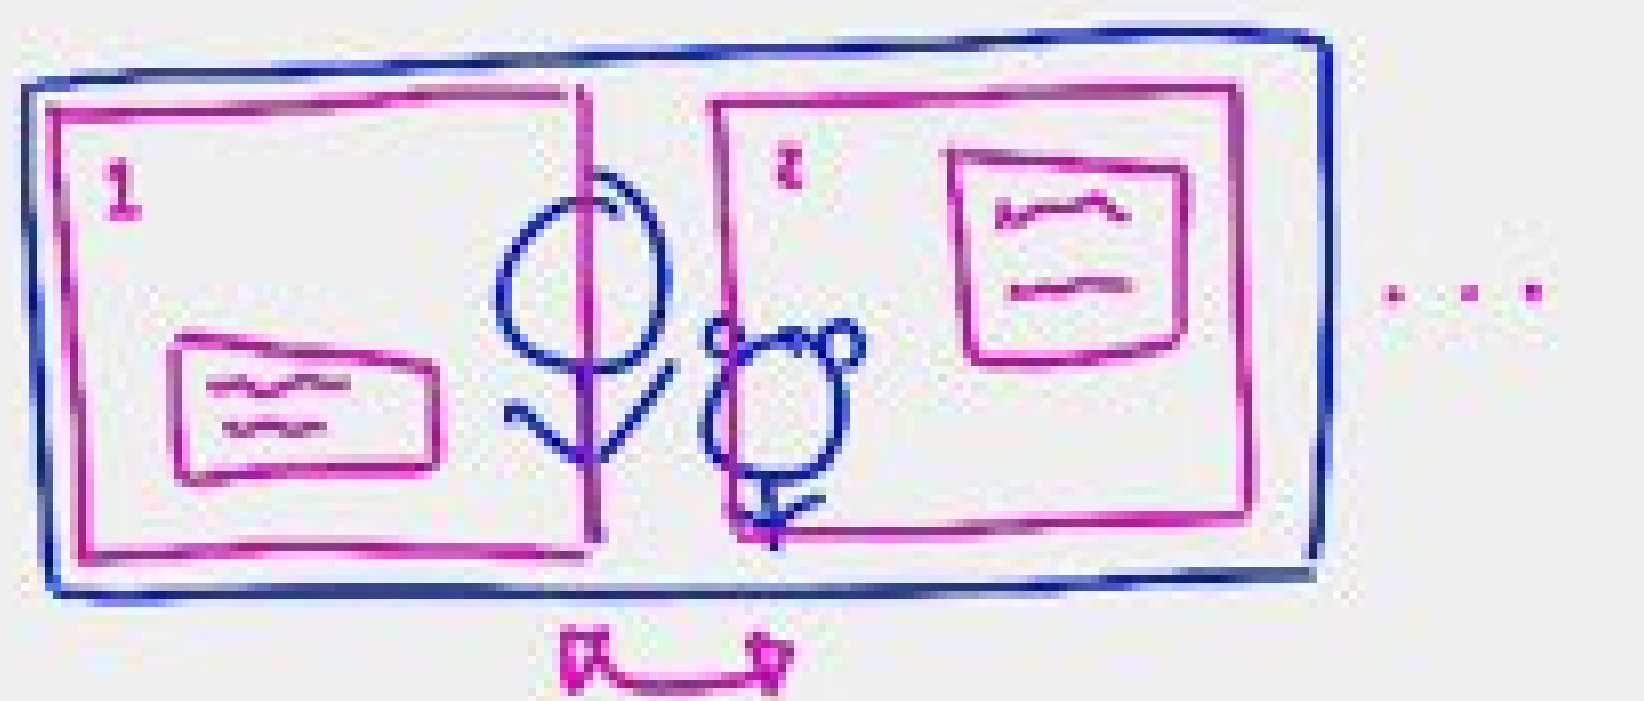

bread crumb

UI navigation home/music/etc.

animated and clickable to move through panels more than "prev./next"

Smooth animation in between "panels" as if scrolling through one big story board that has been zoomed in

background & illustrations always animated to bring life to narrative

some illustrations "pop out"

text animation when it appears to make it more dynamic

Mobile model is the same, horizontal orientation, similar to mobile games but browser supported. If possible, I would like to add motion, so when the phone is tilted, the images/illustrations move with it.

Scrolling will work with touch dragging side to side or with the arrows being clickable
